PROJECTS

Current Projects

2020-present **Autonomous Robotic Early Warning System for Underground Stone Mining Safety**
Sponsor: Alpha Foundation.
Contributions: Design of a tethering system that connects a drone (UAV) to an unmanned ground vehicle (UGV) through a cable to deliver power to the UAV to achieve long endurance missions. The tethering system comprises a sophisticated instrumentation system that controls the tension of the tether whilst reading tether variables (angles, length, tension) required perform the drone localization (secondary task of the tethering system).

Past Projects

2010-2013 **Mini-UAVs for Coverage of Areas with Minimization of Time**
Contributions: Design and prototype an electronic instrumentation system for fixed-wing UAVs. Sensors specification, microcontroller and DSP programming, sensor fusion modeling, simulation and implementation on embedded systems.
Funding: Financiadora de Estudos e Projetos (FINEP/Brazil).

2018-2019 **Estudo Regionalizado da Ação do Vento no Balanço de Cadeias de Isoladores para Projeto de Coordenação de Isolamento de Linhas Aéreas de Transmissão**
Constribuitions: Development of an embedded system based on MEMS accelerometers and gyrometers to implement an electronic inclinometer to measure the inclination angle of insulators of aerial power transmission lines.

Funding: CEMIG/ANEEL.
